Data Mapping - Why is it Important for Successful E-Discovery?

LitSmart E-Discovery Blog

July 28, 2022

Written by **Amy L. Catton**

Data mapping is the creation of an inventory of an organization's data. A data map describes:

- The type of data the exists in the organization;
- Where that data is stored;
- Who the responsible party is for that data; and
- When the data is eligible for archival or deletion.
