The PTAB's Discretionary Denial Crackdown: Strategy, Stats, and Survival Tips

by [Justin L. Krieger](#)

Back in March, I [wrote](#) about Acting Director Coke Morgan Stewart's overhaul of the pre-institution discretionary denial process. Since then, much has been written on the topic and, for better or worse, the dust has started to settle, and one thing is clear: discretionary denials are on the rise. Here's a concise update on where things stand and what it means for stakeholders.

- [Overview](#). The new discretionary denial framework was introduced by the Acting Director in a [Memorandum](#) and further clarified in a [Boardside Chat](#) and updated [FAQs](#). The stated goals of the new process are to: (i) reduce pendency for ex parte appeals and AIA statutory deadlines, (ii) improve PTAB efficiency, and (iii) promote consistency in discretionary considerations.
- [Updated Statistics](#). In 2024, excluding pre-institution settlements, the PTAB's institution rate was around 75%. Under the new regime, it has dropped to approximately 35%—a dramatic 40% decline that reflects a major policy shift. Key grounds for discretionary denial include: the new “settled expectations” doctrine, ongoing parallel proceedings, and impending trial dates in related litigation.
- [Settled Expectations](#). In June, the Acting Director issued her first discretionary denial decision based on “settled expectations.” See *iRhythm Techs. v. Welch Allyn, Inc.*, IPR2025-00363, Paper 10. Under this doctrine, institution may be denied based on the failure to challenge the patent early in its life. Although the Director's opinion in *iRhythm* considered the petitioner's early knowledge of the patent (e.g., shown in an IDS), follow-on decisions indicate that such knowledge is not required for denial under this doctrine. While there's no bright-line rule, the PTAB has pointed to the six-year damages window under 35 U.S.C. § 286 as a reference point. For example, in *Kahoot! AS v. Interstellar Inc.*, IPR2025-00696, Paper 12, the PTAB found that a patent in force for over six years had “strong settled expectations.”
- [PGR free pass](#). Another discretionary denial trigger is the so-called “follow-on petition”—a petition filed after a previous one was denied. Emphasizing that early patent challenges are favored, however, the Acting Director recently indicated that “petitions for *inter partes* review will generally not be discretionarily denied because of an earlier petition for post-grant review when the post-grant review was not instituted.”

LifeVac v. DCSTAR, IPR2025-00454, Paper 11. Thus, petitioners have increased flexibility after an initial PGR challenge fails.

- Strategic Considerations.

- **Patent Owners:** If asserting a patent is part of your long-term plan, consider waiting **at least six years from issuance** to file suit. Doing so may shield the patent from later IPR challenges under the “settled expectations” doctrine.
- **Defendants:** If sued early in a patent’s lifetime, *file your IPR petition as soon as possible*—don’t wait until the one-year bar under 35 U.S.C. § 315(b) is about to expire.
- **Freedom-to-Operate (FTO):** Now more than ever, recurring FTO reviews are crucial. Identifying concerning patents early allows time to file a **PGR or IPR** well within the “safe” window.
- **PGR Strategy:** Don’t be afraid of filing a PGR. Even if it is denied institution, that shouldn’t be held against you in filing a follow-on IPR petition based on better art and arguments.
- **Docketing Tip:** For any potentially problematic third-party patent, **docket the five-year anniversary** of issuance. That gives a one-year cushion to assess and file any necessary IPR before “settled expectations” arguments take hold.
